

ABSTRACT

- A perfluoropolyether, a composition comprising the perfluoropolyether, a process for producing the perfluoropolyether, and a process for improving the thermostability of grease or lubricant are provided. The perfluoropolyether
- 5 comprises perfluoroalkyl radical end groups in which the radical has at least 3 carbon atoms per radical and is substantially free of perfluoromethyl and perfluoroethyl end groups. The process for producing the perfluoropolyether can comprise (1) contacting a perfluoro acid halide, a C₂- to C₄-substituted ethyl epoxide, or a C₃+ fluoroketone with a metal halide to produce an alkoxide;
- 10 (2) contacting the alkoxide with either hexafluoropropylene oxide or tetrafluorooxetane to produce a second acid halide; (3) esterifying the second acid halide to an ester; (4) reducing the ester to its corresponding alcohol;
- (5) converting the alcohol with a base to a salt form; (6) contacting the salt form with a C₃ or higher olefin to produce a fluoropolyether; and (7) fluorinating the
- 15 fluoropolyether. The process for improving the thermostability of a grease or lubricant comprises combining the grease or lubricant with the composition.
